Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutovy Osocgawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; no bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://www.inced.buffalo.edu/drosophila_bac.htm.

The retinas were obtained from a 55 year old caucasian and total cellular poly(A)+ RNA was extracted by rovided by Roderick R. McInnes M.D. Ph.D. from the provided by Roderick R. McInnes M.D. Ph.D. from the Character and M. Farina Romaldo.

/note="Organ: pooled: Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI. Equal amounts of plasmid DNA from five normalized libraries were made and so circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 5 libraries. The pools consisted of the following libraries and cloneIDs: Soares Nb2HP pool 1: 309384-310919, 32308-32895 soares Nb2HP pool 1: 145032-147335, 147720-148103, 148872-149255, 15002 - 150407, 151176-152372 Soares Nb2HP pool 1: 758280-760583, 772104-774407 Soares NbHPA pool 1: 72370-726407, 739080-740999 Subtraction by Bento Soares and M. Fatina Bonaldo."

/note="Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from colon adenocarcinoma, and was then primed with a Not I - oligo(dT) primer. Dobble-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Patima Bonaldo."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tri:fluoro-2-hydroxy-2-methyl-propionic acid enantiomer preparation

- by stereoselective hydrolysis of corresponding racemic amide using

microorganism or derived enzyme, used as drug intermediate

Example 10.2; Page 29; 68pp; German.

W40264-W40275 are peptide fragments of an R-specific amidohydrolase

microorganism to utilise 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide

as its sole nitrogen source. This amidohydrolase is used in a process for

preparing (R)-isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide

preparing (R)-isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide

which is cheaper than prior art optical resolution of the racemate using

dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó

Example 10.2; Page 29; 68pp; German. Wolfd-Wad215 are peptide fragments of an R-specific amidohydrolase isolated from Rlebsiella oxytoca strain PRS1. This enzyme allows the microorganism to utilize 3,3-trifluoro-2-hydroxy-2-methyl propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3,3-trifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Tri:fluoro-2-hydroxy-2-methyl-propionic acid enantiomer preparation by stereoselectrice hydroxysis of corresponding racemic amide using microorganism or derived enzyme, used as drug intermediate Example 10.2; Page 29; 68pp; German.

W40264-W40215 are peptide fragments of an R-specific amidohydrolase isolated from Riebsiella oxytoca strain PRS1. This enzyme allows the microorganism to utilise 3.3; 4rrifluoro-2-hydroxy-2-methyl propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3.3; 4-rifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 98-10163/09.

Tri:fluoro-2-hydroxy-2-methyl-propionic acid enantiomer preparation

- by stereoselectrive hydrolysis of corresponding racemic amide using
microorganism or derived enzyme, used as drug intermediate

Example 10.2; Page 29; 68pp; German.

W40264-W40215 are peptide fragments of an R-specific amidohydrolase
isolated from Rlebsiella oxytoca strain PRS1. This enzyme allows the
microorganism to utilise 3,3,3 trifluoro-2-hydroxy-2-methyl propionamide
as its sole nitrogen source. This amidohydrolase is used in a process for
preparing (R)-isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide
which is cheaper than prior art optical resolution of the racemate using
dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.
                                                                                       16-JUN-1998 (first entry)
K. oxytoca R-specific amidohydrolase peptide T9-1.
R-specific amidohydrolase; hydrolysis; racemate; nitrogen source; 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide; isoform.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           K. oxytoca R-specific amidohydrolase peptide T11.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NAME OF THE PROPERTY OF THE PR
                                                                                                                           Example 10.2; Page 29; 66pp; German.

W40264-W40275 are peptide fragments of an R-specific amidohydrolase isolated from Rlebsiella oxytoca strain PRS1. This enzyme allows the microorganism to utilise 3,3.3-trifluoro-2-hydroxy-2-methyl propionamide as 1ts sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3,3.3-trifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a gamma-lactamase capable of hydrolysing an enantiomer of the bicyclic lactam 2-azabicyclo(2.2.1)hept-5-en-3-one. This enzyme has at least 1 of the following features; greater than 85% retention of activity after incubating at 40 deg. C for 4 hours, or 330% activity after incubating at 60 deg. C for 4 hours, or an initial concentration of 100 g racemic lactam plus 300 ml buffer and proceeding to at least 90 (especially at least 98)% hydrolysis of the (+) lactam with <5% hydrolysis of the (-) lactam. The enzyme is much more temperature-stable than previously identified (+)-gamma-lactamases carried out at very high substrate/product concentrations. This enzyme has applications as a therapeutic agent e.g. as an antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240 EGARTVPPREHGGNCDIKDLSRGSRVFFPVYVDGAGLSVGDLHFSQGDGEITFWGPIEMP 299
                     Tri:fluoro-2-hydroxy-2-methyl-propionic acid enantiomer preparation by stereoselective hydrolysis of corresponding racemic-amide using microorganism or derived enzyme, used as drug intermediate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 132; DB 1; Lengt...

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 claim 6; Page -; 49pp; English.

Novel mutant alpha-amylases contain a deletion or substitution of at least one asparagine residue from the wild-type. The present sequence is a specific example of such a mutant alpha-amylase from which the His residue at position 133 has been deleted. The mutant alpha-amylase is useful for starch processing and liquefaction. It is used in dishwashing or fabric-cleaning detergent compositions. The modifications produce enzymes with enhanced low ph performance suited for commercial liquefaction conditions. The mutant alpha-amylases are also found to have improved thermal and oxidative stability and to be more stable in the absence of calcium ions, compared to wild-type.

N.B. The present sequence is not shown in the specification but is derived from the Bacillus licheniformis alpha-amylase sequence shown in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                69 QKGTVRTKYGTKGELQSA-IKSLHSRDINVYGD-VVINHKGGADATEDVTAVEVDP-ADR 125

Example 10.2; Page 29; 68pp, German.
W40264-W40275 are peptide fragments of an R-specific amidohydrolase isolated from Klebsiella oxytoca strain PRS1. This enzyme allows the microorganism to utilise 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3,3,3-trifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-(-)- alpha -methylbenzylamine.

Tri:fluoro-2-bydroxy-2-methyl-propionic acid enantiomer preparation - by stereoselective hydrolysis of corresponding racemic amide using microorganism or derived enzyme, used as drug intermediate
The present sequence represents a gamma-aminobutyric acid (GABA) receptor subunit from the sheep blow fly, Lucilia cuprina. The GABA receptor subunit protein may be used to develop novel pesticides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lo-JUN-1998 (first entry)

K. oxytoca R-specific amidohydrolase peptide T13-1.

R-specific amidohydrolase; hydrolysis; racemate; nitrogen source; 3, 3, 3-trifluoro-2-hydroxy-2-methyl propionamide; isoform.

Klebsiclla oxytoca.

W09801568-A2.

Substitution of wild-type (IIs by Pro, Ser, Gly or Ala (all are less hydrophobic than His) resulted in proteins with less residual activity after heating than the native enzyme. Replacement of His by Glu, Lys, Glu, Leu, Phe cand Tyr (increasingly more hydrophobic than His) resulted in proteins with a greater residual activity after heating than His. The Tyr133 mutant had a half-life at 90 deg.C of 8 mins, c.f. mins for the wild-type enzyme. Substitution of Ala209 by a more confidence of also enhances the enzyme's thermostability. When the enzyme carries mutations at both positions 133 and 209 it has a half-life at 90 deg.C that is 9:10 times greater than the native enzyme. The mutant alpha-amylases are useful in the brewing,

Claim 2; Fig 1; 17pp; French
The alpha-amylase protein sequence shown differs from the wild-type enzyme by having His 133 mutated to an amino acid that is more hydrophobic than His (see features). The heat stable alpha amylases are useful in textile processing, papermaking and brewing, specifically for hydrolysis (liquifaction) of starch.
                                                                                                                                                                                                                                                                                                                                                                                                                                         4; Gaps

comprising Bacillus licheniformis enzyme having arginine, glycine
and alanine at positions 134, 310 and 320, respectively
Claim 1; Pages 7 +8; 9pp; Japanese.
The present sequence is an acid stable and thermostable Bacillus
licheniformis alpha-amylase (AA), comprising the mutations 134Arg,
310Gly and 320Ala. The AA gene can be used for the recombinant
prodn. Of the mutant AA, which may be useful for investigating the
effects of specific amino acid substitutions on the enzyme's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           'note= "wild type residue substd. with Gly"

Sequence 32, Application US/08468698
Patent No. 5849549
GENERAL INFORMATION:
APPLICANT: Antrim, Richard L.
APPLICANT: Mitchinson, Colin
APPLICANT: Mitchinson, Colin
APPLICANT: Requadt, Carol
APPLICANT: Requadt, Carol
APPLICANT: Solheim, Leif P.
TITLE OF INVENTION: Oxidatively Stable Alpha-Amylase
                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb
COMPUTER: IBM FOC compatible
OPERATUR SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/468,698
FILING DATE: 06-JUN-95
CLASSIFICATION: 435

Mean 48.076; Variance 94.750; scale 0.507 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 49.160; Variance 85.522; scale 0.575

"Comparison of myristoyl-CoA:protein N-myristoyltransferases from
"Linee pathogenic fungl: Cryptococcus neoformans, Histoplasma
capsulatum, and Candida albicans.";
J. Blol. Chem. 269:2996-3009(1994).
-!-FUNCTION: GTP-BINING PROTEIN THAT FUNCTIONS AS AN ALLOSTERIC
ACTIVATOR OF THE CHOLERA TOXIN CAPIALYIC SUBUNIT, AN ADP-
RIBOSYLTRANGFERASE: INVOLVED IN PROTEIN TRAFFICKING; MAY MODULATE
VESICLE BUDDING AND UNCOATING WITHIN THE GOLGI APPRARTUS.
-!- SIMILARITY: BELONGS TO THE ARF FAMILY OF GTP-BINDING PROTEINS.

1- FUNCTION: CHLOROPLAST ONEDA-3 FATTY ACID DESATURASE INTRODUCES
THE THIRD DOUBLEBOND IN THE BIOSYNTHESIS OF 16:3 AND 18:3 FATTY
ACIDS, IMPORTANT CONSTITUENTS OF PLANT MEMBRANES. IT IS THOUGHT
TO USE FERREDOXIN AS AN ELECTRON DONOR AND TO ACT ON FATTY ACIDS
ESTERIFIED TO GALACTOLIPIDS, SULFOLIPIDS AND PHOSPHATIDYLGLYCEROL.

1- PATHWAY: POLYUNARATED FATTY ACID BIOSYNTHESIS.

Mean 47.366; Variance 79.598; scale 0.595 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
